IQVIA Argentina is looking for a Front End Developer. You will identify technology opportunities and build front end software applications and prototypes. Creativity, flexibility and professionalism are vital for a process that aims to transform the portfolio of offerings across Technology Solutions.

Among the responsibilities, we expect candidates to be able to lead and set direction for specific component requirements for the Apollo Design System, as well as providing recommendations to management based off project engagement requirements. This position will work closely with the UI Engineer to build framework components that are distributed via CDN, npm and Bower.

We expect the candidates to compose efficient, modular, reusable SCSS and JS MV components to be used by other developers and create responsive demo websites to showcase your amazing work to stakeholders. Our positions are based on dynamic teamwork, so strong communication skills are vital for us.

Technical skills

BS degree in Engineering, Computer Science or related technical field, or equivalent practical experience
At least 5 years of professional programming and software development experience
Experience building a CSS framework (from scratch or based on another framework)
Advanced experience with SASS (creating functions, mixins, maps)
Experience building a reusable JS MV* Components (from scratch or based on another framework)
Experience creating Bower or npm packages
Fluent in multiple object oriented languages, such as Python and C++, and web based programming languages and tools, such as HTML5, CSS, JavaScript, and JQuery
Fluent in English

At IQVIA, we believe in pushing the boundaries of human science and data science to make the biggest impact possible – to help our customers create a healthier world.
